

PRODUCT SUPPORT BULLETIN BULLETIN NO. 339

DATE: **September 27, 2001**

MACHINE: **NORDCO Epoxy Tie Plugger (NETP)**

SERIAL

NUMBER(S): **S/N 510001 through 510014**

SUBJECT: **Telescoping Chemical Dispensing Gun Boom Kit – 98510023**

When plugging spike holes, there have been some instances where the chemical would leak out of the bottom of the tie. In these cases, it would be advantageous to have one operator initially fill the hole and the second operator would then be able to top off these partially filled holes.

This **Telescoping Boom Kit, p/n 98510023**, has been designed to allow the two Dispensing Guns to be suspended at different distances from the machine. The Telescopic booms can be easily adjusted to different lengths. In addition, the booms are mounted at different heights to prevent interfering with each other during operation. This will allow the one operator to walk far enough behind the other operator to allow the initial fill to cure. The second operator would then be able to fill up any partially filled holes during the tie plugging operation.

The kit includes all of the required parts including new, longer chemical hoses and electric control cables, telescoping booms, mounting brackets and hardware. Installation instructions are also included. Some cutting and welding is required to install this kit. Installation should take about 8 hours.

Note: This kit has been installed on machine s/n 510005 by NORDCO.

Please contact your NORDCO Representative or the NORDCO Parts Department for pricing and availability.
